Algeria primarily relies on fossil fuels for energy generation, with nearly 97% of its electricity capacity derived from these sources. The country has seen significant growth in its electricity capacity, which nearly doubled from 2011 to 2020, mainly due to the addition of more efficient natural gas-fired and combined-cycle gas turbine plants. However, Algeria is also aiming to increase its renewable energy capacity to 15 GW by

2035, starting with a solicitation for bids to i...

Amid profound shifts in global energy and its first new government in nearly twenty years, Algeria announced the transition of its energy model away from hydrocarbons to renewable energy. This is significant given that Algeria generates almost all its power from hydrocarbon resources.

Kami meyakini bahwa kemajuan teknologi saat ini harus dimanfaatkan untuk mendukung pembangunan masyarakat di Indonesia.
