

Armenia baran energy

Does Armenia have solar energy?

Armenia has significant solar energy potential: average annual solar energy flow per square metre of horizontal surface is 1 720 kWh (the European average is 1 000 kWh), and one-quarter of the country's territory is endowed with solar energy resources of 1 850 kWh/m² per year. Solar thermal energy is therefore developing rapidly in Armenia.

How does Armenia generate electricity?

Most of the rest of Armenia's electricity is generated by the natural gas-fired thermal power plants in Yerevan (completed in 2010) and Hrazdan. Upon gaining independence, Armenia signed the European Energy Charter in December 1991, the charter is now known as the Energy Charter Treaty which promotes integration of global energy markets.

What are the main energy sources in Armenia?

Since 1996 three main energy sources for electricity generation in Armenia were natural gas, nuclear power and hydropower. Despite a lack of fossil fuel, Armenia has significant domestic electricity generation resources.

Does Armenia use natural gas?

Natural gas represents a large portion of total energy consumption in Armenia, accounting for 50% and is the primary means of winter heating in the country.

How much gas does Armenia import from Iran?

In 2009 Armenia was importing 1-1.5 million cubic meters of Iranian natural gas, paying for this by electricity exports. Armenia receives about 370 million cubic meters of gas a year from Iran, which is converted into electricity and is sent back to Iran.

Is biomass a source of electricity in Armenia?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Armenia: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.
