

What is energy in Belgium?

Energy in Belgium describes energy and electricity production, consumption and import in Belgium. It is governed by the energy policy of Belgium, which is divided between several levels of government.

Does Belgium rely on nuclear energy?

In line with the EU's energy targets, Belgium has become largely reliant on nuclear energy and around 46.4 percent of the country's total electricity production was from nuclear energy as of 2022.

What is Belgium's energy policy?

It is governed by the energy policy of Belgium, which is divided between several levels of government. For example, regional governments are responsible for awarding green certificates (except for offshore wind parks) while the national government is responsible for all nuclear power.

Will Belgium's energy supply be lower in 2025-26?

Belgium reversed its plans to completely phase-out nuclear energy for electricity production in March 2022, and now must address recent reports that its energy supply will be lower than anticipated in 2025-26 and potentially this winter if pipeline gas imports from the UK are shut-off due to prolonged sub-zero temperatures.

How is the energy sector shaped in Belgium?

The energy sector in Belgium is shaped by the policies of its national and regional governments, as well as the European Union. The monitoring of the electricity and natural gas market happens on three regional levels, the Brussels-capital region, the Flemish region, and the Walloon region.

Does Belgium have a 55% reduction in emissions by 2030?

Belgium as a whole has a target of a 55% reduction in emissions by 2030. Primary energy is the amount of extractable energy present in fuels as they are found in nature. It is often expressed in tonnes of oil equivalent (toe) or watt-hour (Wh). Unless stated otherwise the lower heating value is used in the remainder of this text.

Whilst food inflation remains high across Europe, energy bills in Belgium have been bouncing up and down this past year. From the scary highs of winter when a single invoice could bankrupt a business and the government had to step in to limit the damage, many households were pleasantly surprised to receive significant sums paid back early in 2023, ...

The disruption sweeping the energy and resources industry brings more opportunities than challenges -- for companies that get ahead of change. Decarbonization, digitization, cost pressures and geopolitical uncertainty are just some of the forces transforming the energy and resources industry.

In its 2023 country report published in May, the European Commission was blunt about Belgium's prospects for the green transition. "Belgium faces significant challenges in moving to a green and climate-resilient economy," it said, citing the country's "strong reliance on imported fossil fuels" as a particular block to climate neutrality by 2050.
