

Belgium power vault 21000

Will Belgium's energy mix be reliant on imports in 2035-2050?

Belgium's existing generation facilities and already-approved investments can provide only half of what is needed in the long term. Therefore, new governments will soon have to consider the desired energy mix for the period 2035-2050 and how reliant the country is willing to be on imports.

Will Belgium become more reliant on electricity imports?

If policy remains unchanged, we will see Belgium's dependence on electricity imports steadily increase, from 50-60 TWh in 2036 to 70-90 TWh in 2050. Without a long-term strategy on the future energy mix and new policy measures, Belgium will therefore become more reliant on electricity imports.

How will energy consumption change in Belgium by 2050?

By 2050, energy consumption from buildings, transport, and industry will fall by around 40%. These efficiency gains will be mainly driven by increasing electrification. Although molecules will remain vital for some parts of industry, system operator Elia expects electricity consumption in Belgium to more than double by 2050.

La certification RCS garantit une charge d'approvisionnement entièrement certifiée pour les matériaux recyclés. Le Power vault est parfait pour les activités de plein air, les voyages ou avoir la maison en cas d'urgence. La batterie de 21000 mAh peut charger plusieurs objets à la fois grâce aux 3 ports de sortie (2x USB A, 1X type C).
