

What does Elia transmission Belgium's memorandum say about energy issues?

With Belgian federal and regional elections coming up in June this year, Elia Transmission Belgium's memorandum outlines the energy-related challenges that our next leaders will face. Elia Group's 'Integrated annual report 2023: Fully Charged for Change'.

How will Belgium's energy landscape change over the next 25 years?

BRUSSELS |The Belgian energy landscape will undergo an immense transformation over the next 25 years, but the outlook is nevertheless positive. By 2050, energy consumption from buildings, transport, and industry will fall by around 40%. These efficiency gains will be mainly driven by increasing electrification.

What can Elia's blueprint tell us about the future of Belgian energy?

Elia's blueprint offers insights that can help with this process. Over the next 25 years, the Belgian economy will accelerate the phase-out of fossil fuel use. There will be a decisive switch to electrification, or to low-carbon molecules (hydrogen, methane, ammonia, etc.) where electrification is not possible.

Will Belgium's energy mix be reliant on imports in 2035-2050?

Belgium's existing generation facilities and already-approved investments can provide only half of what is needed in the long term. Therefore, new governments will soon have to consider the desired energy mix for the period 2035-2050 and how reliant the country is willing to be on imports.

How is the energy sector shaped in Belgium?

The energy sector in Belgium is shaped by the policies of its national and regional governments, as well as the European Union. The monitoring of the electricity and natural gas market happens on three regional levels, the Brussels-capital region, the Flemish region, and the Walloon region.

Will Belgium become more reliant on electricity imports?

If policy remains unchanged, we will see Belgium's dependence on electricity imports steadily increase, from 50-60 TWh in 2036 to 70-90 TWh in 2050. Without a long-term strategy on the future energy mix and new policy measures, Belgium will therefore become more reliant on electricity imports.
