

Benefits of solar panels generating electricity in winter

Do solar panels work in the winter?

Yes, solar panels work in the winter. In fact, solar panels can generate electricity in almost any type of weather. Cold weather doesn't affect solar panel performance (unless temperatures go below -40°C), since they operate on sunlight, which is still available in winter in the UK - albeit, at much lower levels than in the summer.

Why do solar panels generate less electricity in winter?

This is one reason why solar panels generate less electricity in winter - the days are just shorter. There also tend to be more cloudy days in winter, which can reduce the solar panels' output.
