

Does Benin have a green energy policy?

To provide clean energy at a lower cost to their citizens, all nations of the world are striving to increase their energy production in an environmentally friendly way. Benin has also joined this dynamic by considerably increasing its green energy production efforts in recent years.

What is Benin's current energy situation?

This section provides information on Benin's current energy situation with energy demand-and-supply scenarios. According to the International Renewable Energy Agency (IRENA), 41% of Benin's population currently have access to electricity.

Which institutions are working to provide access to affordable energy in Benin?

Several institutional frameworks in the energy sector in Benin are working to provide access to affordable energy in the country. The ME is the biggest institution of the energy sector, responsible for the management of the energy sector and in charge of the implementation of RE projects.

Is Benin a good country for energy?

With a total surface area of 114 763 km<sup>2</sup>, the country is endowed with a high potential for energy resources. However, almost 59% of Benin's population currently lacks access to electricity and the country is heavily dependent on external energy importation.

What is the energy sector strategy in Benin?

In Benin, the energy sector strategy is aimed at improving the energy independence of the country and diversifying its sources of supply through the implementation of various interconnection projects with neighbouring countries and the enhancement of the national RE potential.

Does wind energy contribute to the electrification of Benin?

Although hydroelectricity, biomass and especially PV technologies play an increasingly important role in the electrification of Benin, recent studies have shown that wind energy technologies can also contribute. Non-electrified rural and peri-urban localities have favourable wind potential in coastal Benin.

Les Soleils du Bénin, a special purpose vehicle (SPV) jointly developed by GDS International and Africa Renewable Energy System & Solution ("ARESS"), in partnership with ...

o The data (namely: the load profile data, weather data and components costs) can serve as input for renewable energy system sizing in Benin or similar environment. o This data is useful to assess the electrical production performances of PV/Diesel Generator/Battery configurations system under different seasonal conditions in a year
