

## Bulgaria energy storage plants

## Why do we need energy storage solutions in Bulgaria?

ablish a reliable energy system with greater share of intermittent generation. In the context of Bulgaria's energy landscape, energy storage solutions present a diverse array of benefits to various stakeholders stemming fro its unique ability to time-shift energy and rapidly respond when called upon. The applic

Which energy sources can be used in Bulgaria?

Renewable energy includes wind, solar, biomass and geothermalenergy sources (although it is not yet known whether geothermal energy could generate any electrical power as only slightly over 100 degrees C had been found by 2023). Bulgaria has a high potential for solar irradiation, especially in the southern regions of the nation.

Is a peaking plant a viable alternative for Bulgaria's peaking capacity needs?

ctive and fast-responding alternative for Bulgaria's peaking capacity needs. With limited natural gas reserves and uncertain costs for imported energy, storage can provi e a reliable source of power during peak demand periods on the Bulgarian grid. Compared to traditional peaking plants

Can battery-based energy storage improve peaking capacity in Bulgaria?

storage can also ofer greater flexibility and eficiency in managing the grid. Furthermore, and although hydropower storage already makes up a significant source of peaking capacity in Bulgaria, battery-based energy storage can address peaking needs during times of droughts, meet requirements for more distributed peaking po

Where does Bulgaria get its electricity from?

ity came from thermal power stations, and only 7 percent from solar and wind1. Historically, Bulgaria has also been a major producer and exporter of electricity for the surrounding region with a total of 10 inte connectors spread across Romania, Serbia, North Macedonia, Greece, and Turkey. The country thus has a critical role in driving a more s

What challenges will Bulgaria face on its energy transition?

d a glimpse of the new challenges Bulgaria will face on its energy transition. In May 20 3, Bulgaria was for the first time in a decade a net importer of electricity2. The reason for this was not a lack of generating capacity, but instead the natural logic of power markets seeking the

There are currently three operational pumped hydro storage projects in the Republic of Bulgaria. Their combined capacity is around 1.4 GW. All these three projects are operated by the National Electricity Company EAD, a company licensed as the Public Supplier and for the production of electricity under the Bulgarian laws.

## Bulgaria energy storage plants

The Restore project in Bulgaria for battery energy storage, intended for balancing electricity from renewable sources, will total 6 GWh. A state-owned company, which should be established by the end of June, will run the entire project, while the first tenders should be completed by the end of September. ... The first energy storage plants ...

The repair works will be funded by NEK and from external sources, Hristov revealed. The hydropower plant operator and electricity supplier and trader is part of state-owned utility Bulgarian Energy Holding or BEH. "The ...

In Bulgaria, there are 242 hydropower plants in operation. In total, the National Electric Company (NEK) owns 30 conventional hydro and pumped storage plants with a total installed capacity of 2,713 MW in generating mode and 937 MW in ...

Fortunately, Bulgaria sits in the privileged position where it can profit from the experiences of other energy systems with high renewable shares. Here, battery-based energy storage is integrated as a reliable and cost-efficient solution that increases system flexibility and allows for integration of greater shares of low-cost renewables ...

Bulgaria's Ministry of Energy is currently running two tenders aiming to commission 1,425 MW of solar and wind generation capacity coupled with 350 MW of behind-the-meter energy storage. The deadline for submitting ...

National Electricity Co. - NEK is preparing to invest in two floating solar power and two pumped storage hydropower plants and developing battery energy storage proposals. Most of the Bulgarian state-owned power ...

Shanghai Sermatec Energy Technology Co has successfully installed a 5.1 MW/17 MWh battery energy storage system (BESS) in Bulgaria for an undisclosed client operating a solar power plant. This installation aims to address the client's challenge of excess solar electricity generation, which previously resulted in wasted energy during the day and the ...

Bulgaria''s call for standalone energy storage is 4.3 times oversubscribed. Bulgarian citizens demand referendum on wind farms on agricultural land. ... 2024 - Developers of 249 projects in Bulgaria will receive EUR 268 million in total grants for renewable electricity plants with energy storage.

Bulgaria relying heavily on energy storage in green transition. Bulgaria already held the first two tenders for battery energy storage systems (BESS) that would be integrated ...

BGH2A: Building Trust and Partnerships for a Climate-Neutral Bulgaria by 2050 | The Bulgarian Hydrogen, Fuel Cell, and Energy Storage Association (BGH2A) is a non-profit organization dedicated to promoting hydrogen and fuel cell technologies in Bulgaria and the surrounding region. We provide a robust network for

## **Bulgaria energy storage plants**

research, development, and deployment, fostering ...

The project is the first utility-scale Battery Energy Storage System in Bulgaria as well as one of the first of such scale in Eastern Europe. The 25MW/55 MWh BESS supports a 33 MWp PV plant equipped with a photovoltaic tracker mounting system. Solarpro Technology is providing turnkey EPC services. The project features 16 energy storage ...

Government to direct EUR 449 million into solar power plants with battery storage. ... EUR 449 million, followed by electricity and gas transmission and hydrogen and geothermal energy endeavors. Bulgaria set a minimum goal of 1.7 GW in new photovoltaics, which would double its capacity, separated into six semiannual tenders starting next year. ...

Among them is the development of pumped-storage hydropower plants, which could become the largest energy storage batteries in the region," said interim Energy Minister, Vladimir Malinov. "The implementation of such projects will enhance our energy security, improve Bulgaria''s energy infrastructure and achieve our decarbonization goals.

Another tender underway for standalone energy storage projects. Bulgaria is relying heavily on battery technology and energy storage overall in its energy transition. With the surge in photovoltaic capacity, ambitious plans for renewables as a whole and a collapse in the coal power segment, the country needs urgent grid upgrades as well.

Could you give our readers an overview of your energy storage project in Razlog, Bulgaria? The project is the first utility-scale Battery Energy Storage System in Bulgaria as well as one of the first of such scale in Eastern Europe. The 25MW/55 MWh BESS ...
