

Are containerised substations a good option for remote areas?

Containerised substations are incredibly useful in remote areas. Civil construction costs are high, and converting a standard marine specification container into a substation is significantly less expensive than arranging for on-site construction of switchgear housing.

Are containerised substations a good investment?

One key area where big industries can make significant cost savings is by using purpose-made, containerised substations. These repurposed marine shipping containers arrive on-site pre-installed with fully tested switchgear, ready for immediate cable connection. Containerised substations are incredibly useful in remote areas.

What is a containerised substation?

The containerised substations are compact and consist of power factor correction equipment, ring main units, switchboards and dry type transformers encased in robust enclosures. Renewable energy plants require many outdoor inverter enclosures housing the DC inverter, AC Inverter, power transformer and protection.

What equipment can a modular substation accommodate?

Our modular substations can accommodate any of the equipment usually associated with conventional substations. This includes dry-type or cast resin transformers, low voltage (LV) or medium voltage (MW) switchgear and control and automation equipment. Trafo Power Solutions supplies custom-built modular substations to meet a range of customer needs.

What are the benefits of containerised substations?

Another huge benefit of containerised substations is that they are fully equipped and assembled at the manufacturer's premises, and can comprise bespoke combinations of distribution equipment, control gear and PLC equipment. All this equipment undergoes full functional testing before being dispatched, which translates to huge time savings on site.

What makes our container solutions unique?

Our container solutions are underpinned by meticulous planning, thoughtful design, and technical expertise. As a market leader, we continuously explore new technologies and can confidently design, build and deliver state-of-the-art container solutions that are sustainable, efficient, and requiring of minimal maintenance.
