

Energy flow Uruguay

Where does Uruguay get its energy from?

Uruguay primarily imports natural gas from Argentina via the Gasoducto Cruz del Sur. As of May 2021, there are no new projects proposed for oil and gas in Uruguay. Uruguay generates nearly half of its electricity from wind and solar, more than any other country in Latin America and the Caribbean.

How much electricity does Uruguay produce?

In 2020, Uruguay produced 13.5 TWh of electricity, with 40% coming from wind energy, 30% from hydro, 20% from biomass, 6% from fossil fuels, and 4% from solar. As of 2020, 100% of the population has access to electricity. The UTE is spending \$960 million between 2020-2025 for installing new electrical transmission infrastructure.

How much electricity does Uruguay generate from wind & solar?

Uruguay generates nearly half of its electricity from wind and solar, more than any other country in Latin America and the Caribbean. Source: Visual Capitalist: Solar & Wind Power by Country; 2020 The World Bank, Source: Global Solar Atlas 2.0, Solar resource data: Solargis.

Is Uruguay a repeatable framework of energy sovereignty for developing countries?

Ramírez Mendez Galain believes so. Uruguay's former national director of energy in the Ministry of Industry, Energy and Mining, who was the impetus for the country's shift away from dirty fuels, has been promoting the country's success as a repeatable framework of energy sovereignty for developing countries.

What happened to oil in Uruguay?

When severe droughts struck in 1999, 2004, 2006, and again in 2008, the country was forced to import ever larger quantities of oil. In 2005, oil made up 55% of Uruguay's total energy supply, and residents still experienced blackouts and energy rationing. "In dry years...cost overruns could be as high as \$1 billion.

Does Uruguay have fossil fuels?

A relatively small nation spanning 175,000 square kilometres (76,568 square miles) with a population of 3.4 million - 96% of whom live in urban centres - Uruguay has no significant fossil fuel reserves. Fortunately, its geography makes it ideal for utilizing powerful rivers and uninterrupted grasslands for wind energy.
