

Energy storage system testing equipment

Who can benefit from energy storage testing & certification services?

We provide a range of energy storage testing and certification services. These services benefit end users, such as electrical utility companies and commercial businesses, producers of energy storage systems, and supply chain companies that provide components and systems, such as inverters, solar panels, and batteries, to producers.

What is energy storage systems (ESS)?

Global changes in energy generation and delivery have made Energy Storage Systems (ESS) crucial. CSA Group can evaluate and test your ESS at our advanced laboratories or in the field so you can provide an uninterrupted and safe supply of energy for your customers. Standards offer enormous quality, safety and sustainability benefits.

How a comprehensive energy storage system certification is conducted?

Our comprehensive energy storage system certification is conducted according to the following five-step approach: Our global network of experts is extensively experienced in the cross-industry inspection, testing and certification of energy storage systems.

Are energy storage systems reliable and efficient?

Energy storage systems are reliable and efficient, and they can be tailored to custom solutions for a company's specific needs. Benefits of energy storage system testing and certification: We have extensive testing and certification experience.

How can UL help with large energy storage systems?

We conduct custom research to help identify and address the unique performance and safety issues associated with large energy storage systems. Research offerings include: UL can test your large energy storage systems (ESS) based on UL 9540 and provide ESS certification to help identify the safety and performance of your system.

Why do you need ESS battery testing?

Stationary lithium-ion storage systems, which are increasingly popular due to their energy density and cyclic strength, impose special demands on safety which must be met. ESS battery testing provides multiple benefits to you as manufacturer and to your customers:

Safety requirements for secondary lithium cells and batteries for use in electrical energy storage systems. VDE-AR-E 2510-50 . Stationary battery energy storage system with lithium batteries ...

The International Renewable Energy Agency predicts that with current national policies, targets and energy
