

# Fengjun 7 generator fault light is on

What does a fault light mean on a generator?

**AC Sensing Loss** The fault lamp illuminates yellow and the alarm horn sounds when the controller does not detect the nominal generator set AC output voltage after crank disconnect. The controller displays AC Sens Loss Warning. **Battery Charger Fault** The fault lamp illuminates yellow and the alarm horn sounds when the battery charger malfunctions.

What does a green light mean on a generator?

**Green (A):** The "Ready" status, illuminates when the utility is present and the unit is in auto. This light also flashes when there is an outage and the unit is running. **Red (B):** The "Alarm" status, illuminates when the generator is OFF or a shutdown alarm is detected. Most alarm codes require an authorized service dealer to address.

What do error codes mean on a generator?

Error codes, also known as "alarm codes", indicate status or issues with the operation of the generator. Many error codes are accompanied by a yellow light, and these can often be addressed by the end user. Error codes that are accompanied by a red light will usually require a service call.

What does a yellow light mean on a home standby generator?

Many error codes are accompanied by a yellow light, and these can often be addressed by the end user. Error codes that are accompanied by a red light will usually require a service call. See the [What Do the Green, Yellow, and Red Status Indicator Lights Mean on Home Standby Generators?](#) article for more information.
