

What type of energy is used in Serbia?

Energy in Serbia is dominated by fossil fuels, despite the public preference for renewable energy. Serbia's Total Energy Supply is almost 700 PJ, with the energy mix in 2021 comprising coal (45%), oil (24%), gas (15%), and renewables (16%).

How many MW of electricity does Serbia have?

Installed capacity of hydro power is 2,835 MW and as of December 2019 wind power capacity is 500 MW. Serbia also makes use of geothermal and solar energy, currently 27% of Serbia's electricity comes from hydro while 4% comes from other renewables. Additional 600 MW of wind capacity is planned by 2030.

When did Serbia start producing electricity?

On 6 October 1893, the first Serbian power plant, located in the Dorcol urban neighborhood of Belgrade, began production of electricity. In 1900, the first alternating current hydroelectric power plant Pod gradom in Uzice on the river Detinja went online.

What are the two largest power plants in Serbia?

The two largest power plants in Serbia, the hydroelectric power plant HPP Derdap I at the Danube river and the coal power plant TENT, went into operation in 1970. Twelve years later, the pumped storage plant Bajina Basta was built, and in 1990 the hydroelectric power station Pirot was put into operation.

Total Energy Supply is almost 700 PJ, with the energy mix in 2021 comprising coal (45%), oil (24%), gas (15%), and ...

Serbia is mostly an energy importer of oil and natural gas which, along with coal products constitute around 90% of its yearly energy consumption. Although the country has produced oil and gas in small quantities since the mid-50s, it is heavily reliant on imports, mostly from Russia. In March 2013 a long-term deal was signed with Gazprom to extend gas imports of more than ...
