Is Finland a good place to invest in batteries?

As the only country in the world capable of managing the entire battery value chain, from mineral extraction to recycling, Finland is uniquely positioned to respond to the surge in demand for batteries stemming mostly from the rapid proliferation of electric vehicles in Europe.

Does Finland have a battery industry?

"Finland not only has all the key minerals for batteries but also outstanding competence in research and production," he stated. "We are eager to build dialogue with other countries on halving transport emissions by 2030 and, in connection to this goal, on developing a sustainable battery industry."

Are batteries being re-thought in Finland?

Also batteries themselves are being re-thought in Finland. Geyser Batteries in May announced it will establish a pilot facility for producing and developing batteries based on its proprietary water-based electrochemical technology in Mikkeli, Eastern Finland.

How much will sodium ion batteries cost in 2028?

Assuming a similar capex cost to Li-ion-based battery energy storage systems (BESS) at \$300/kWh, sodium-ion batteries' 57% improvement rate will see them increasingly more affordable than Li-ion cells, reaching around \$10/kWh by 2028.

Are sodium-ion batteries a ripe market?

Meanwhile, Argonne notes that stationary energy storage is another ripe market for sodium-ion batteries. Sure enough, over at the Pacific Northwest National Laboratory another kind of sodium battery is taking shape, which deploys a combination of aluminum and sodium in the form of a molten salt.

Could sodium-ion batteries transform the battery industry?

Sodium-ion batteries could further transform the industry by reducing costs and critical mineral reliance. IEA's report states, "In 2023, leading battery manufacturers announced expansion plans for sodium-ion batteries, such as BYD, Northvolt, and CATL, which initially sought to reach mass production by the end of the same year."

Na-ion cells are likely to come at a price premium initially, but IDTechEx expect a drop in cost/price in the short term through manufacturing efficiencies, scale, and technology development.
