

# Great Wall Fengjun 6 generator installation diagram

How do I connect a 240V generator to a wall?

Now connect a 3-pin power socket (for small load) or 32A, 240V power socket - male (for large load) to the 6AVG wire and install onto the wall (near to the generator) and put the generator 3-pin power plug or or 32A, 240V power socket (female) into the power socket which you have installed before.

What size combustible wall should a generator be?

Based on this testing and the requirements of NFPA 37, Sec 4.1.4, the guidelines for installation of the generators listed above are changed to 18 in (457 mm) from the back side of the generator and 3 ft (914 mm) from the front and end of the generator to a structure having combustible walls.

How close can a generator be to a wall?

No operable windows, doors, or openings in the wall are permitted within 5 ft (1.52 m) from any point of the generator. One-hour fire rated walls allow closer placement of the generator set. Confirm before installation. Removable fence panels for servicing cannot be placed less than 3 ft (0.91 m) in front of the generator.

How far from a combustible wall should an engine generator be located?

Its requirements limit the spacing of an engine generator to a minimum of 5 ft (1.5 m) from an opening in a structure or a structure having combustible walls, and require the engine generator to be located where it is readily accessible for maintenance, repair, and first responders.

How do I install a generator set?

Install the generator set on a concrete pad or base slab able to support its weight and accessories. A proper foundation is needed to resist dynamic loading and reduce transmitted noise and vibration. The exact composition of the mounting pad must follow standard engineering practices for the required loading and application.

What are the NFPA guidelines for installing a generator?

Based on this testing and the requirements of NFPA 37, Sec 4.1.4, the guidelines for installation of the generators listed above are changed to 18 in (457 mm) from the back side of the generator to a stationary wall or building (C).
