

How to get air into and out of a generator

How do you vent out a generator exhaust?

Venting out the generator exhaust will keep clean and toxic-free air inside your home. You can attach an exhaust extension to direct the exhaust gases outside the house. The extension installation will require a flexible, durable, and heat-resistant tube or pipe. You must also create a hole in the wall where the extension passes through.

How do you vent a generator in a garage?

There are two ways to vent a generator in a garage. The first option is to connect the generator's exhaust to a long flexible exhaust tube and route it to a well-ventilated area. The second option is to connect the generator's exhaust to a PVC vent pipe outside that discharges the fumes into the atmosphere.

Can you vent a generator exhaust outside?

The exhaust from your generator should not vent inside your home. It is critical to redirect the exhaust because toxic gases can be harmful to you and your family's health. To keep you safe and breathe clean air inside your home, you can learn from this post how to vent your generator exhaust outside.

Where should a generator air duct be placed?

The air should flow over the entire generator horizontally, thereby cooling the alternator and effectively purging internal heat. As for the exhaust fans, they should be placed high and directly above the generator to extract heat and undesirable emissions. Air Duct: Duct systems are likely to require multiple turns.

How do you run a generator outside a garage?

Any time you want to run your generator, route the other end of the flex tube outside your garage to a well-ventilated space. You can route it through the windows, or under a slightly opened garage door. Whatever works for you.

How do you extend a generator exhaust?

You can extend the generator exhaust outside by installing an exhaust extension. We recommend using a flexible tube for the extension. Find the right extension length and attach it to an extension tube or pipe. Secure the tube with a clamp. Attach the extension to the exhaust. Pass the extension through a sheltered wall. Test the exhaust for leaks.
