How do I use the Global Solar Atlas?

Welcome to the Global Solar Atlas. Start exploring solar potential by clicking on the map. Select sites, draw rectangles or polygons by clicking the respective map controls. Calculate energy production for selected sites. The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

What are the features of the Global Solar Atlas?

The Global Solar Atlas offers 4 key features: 1. Interactive maps Interactive maps allow visualisation of solar resource potential for a region and provide annual average values for each map click. 2. PV energy yield calculator PV yield calculator allows calculation of long-term energy yield for a custom-defined PV system.

Is the Global Solar Atlas suitable for project-specific analysis of large power plants?

For project-specific analysis of large power plants, the data available via the Global Solar Atlas is suitable only for preliminary analysis. The PV yield estimates do not account for many important factors that can impact potential yield of a photovoltaic power plant.

What is the Global Solar Atlas (GSA)?

The Global Solar Atlas (GSA) is a free, online, map-based application that provides information on solar resource and photovoltaic power potential globally. It features the online interactive map tools, simplified photovoltaic (PV) power calculator, reporting tools and the extensive download section.

What are pvgis solar panels made of?

By default, PVGIS provides solar panels made up of crystalline silicon cells. These solar panels correspond to the majority of rooftop-installed solar panel technology. PVGIS does not differentiate between polycrystalline and monocrystalline cells.

What if the marker does not correspond to my solar production address?

Provide the following information If the marker does not correspond to your solar production address, use an area approach, using the + and - on the map to geographically define your GPS point. O (Opacity) modifies the opacity of the map and the visualization of solar irradiance through a color gradient defined in L (Legend).
