Do IEA islands need resilient power systems?

Islands need resilient power systems more than ever. Clean energy can deliver - Analysis - IEA Islands need resilient power systems more than ever.

What is the energy transitions initiative?

Discover more tools and initiatives from the Energy Transitions Initiative. The Energy Transitions Initiative's island energy snapshots highlight the energy landscape of islands in the Caribbean, the Pacific, and the surrounding areas, which have some of the world's highest electricity prices in the world.

Could distributed energy resources boost the deployment of renewables on islands?

Distributed energy resources - or small-scale energy resources that are usually situated near sites of electricity use, such as rooftop solar - could play an important role in boosting the deployment of renewables on islands, increasing the security, resilience and affordability of power systems while accelerating decarbonisation.

Why are island communities so vulnerable?

Islands also experience some of the highest energy costs and resource insecurity and are often home to important and unique ecosystems. These ecosystems can be extremely vulnerable to the existing energy infrastructures serving island communities.

What are the challenges faced by remote and island communities?

Remote and island communities face several energy challenges, including unreliable power, lack of robust connections to mainstream power grids, and threats from strengthening storms.

Why do small island states have a unique economic and ecological vulnerability?

Small Island states share a number of unique economic and ecological vulnerabilities. Islanders depend heavily on the resources of an inherently limited environment, and any resources not provided by the island (fuel, food, labor, etc.) must be imported at great expense (Ewing-Chow 2020).

So why do so many people want a piece of Navassa Island? (archived version of article from The Baltimore City Paper) U.S. Supreme Court -- Jones v. United States, 137 U.S. 202 -- 1890 (Justia) Court declines to take up petition seeking to overturn Insular Cases (SCOTUSblog) *Fitisemanu v. United States* (SCOTUSblog)

Leaves are nature's power plants and have already inspired solutions for projects seeking the most effective models to capture and use energy from the sun. The most recent comes from Australia's RMIT University, where a team used fern leaf structures to develop a new type of electrode, which it claims could boost the capacity of existing ...
