

#### Are iron-air batteries the future of energy?

Iron-Air Batteries Are Here. They May Alter the Future of Energy. Battery tech is now entering the Iron Age. Iron-air batteries could solve some of lithium 's shortcomings related to energy storage. Form Energy is building a new iron-air battery facility in West Virginia. NASA experimented with iron-air batteries in the 1960s.

#### How do iron-air batteries work?

Iron-air batteries work by taking advantage of the rusting process of iron. They aren't a new technology,but they have yet to be commercialized. When an iron-air battery discharges,iron metal combines with oxygen,forming iron oxide (rust) and releasing electrons. This flow of electrons provides energy in the form of electricity.

### What are iron-air batteries?

Iron-air batteries are the best solution to balance the multi-day variability of renewable energydue to their extremely low cost, safety, durability, and global scalability. Our first commercial product using our iron-air technology is optimized to store electricity for 100 hours at system costs competitive with legacy power plants.

### Are iron-air batteries safe?

The active components of our iron-air battery system are some of the safest, cheapest, and most abundant materials on the planet-- low-cost iron, water, and air. Iron-air batteries are the best solution to balance the multi-day variability of renewable energy due to their extremely low cost, safety, durability, and global scalability.

Can iron-air batteries be built at one-tenth the cost of lithium-ion batteries?

Form has demonstrated that iron-air batteries can be built at one-tenth the cost of lithium-ion batteries, largely because the primary materials used to make them are cheap and abundant. That low cost could make it feasible for utilities to use the batteries for long-duration scenarios, storing energy for up to 100 hours.

Why should you choose iron-air batteries?

High recyclability. The active components of our iron-air battery system are some of the safest, cheapest, and most abundant materials on the planet -- low-cost iron, water, and air.
