

# Is solar power good for cycling

Are solar panels a good option for bike touring?

Solar panels can be a great addition to any bike touring gear list and make a convenient camping companion. Allowing you to be essentially off the grid, and be up in the mountains charging your devices, to continue to get you on your way. But it is not all sunshine and rainbows. Whoops. Pardon the pun there!

Are solar panels good for bikepacking?

If you are heading off on a week long bikepacking adventure in the mountains, and the weather is forecasted for sunny days, you should be all good. Keep in mind that solar panels charge your devices slower than the performance you could get out of a wall charge, at a coffee shop or something. The time available to charge is a consideration.

How many watts a solar panel should a bike tourer use?

The watt amount of your solar panel is also important, you don't want a small solar panel that only pumps out a couple watts. Most bike tourers use anything around 20 watts or higher. Also depending on your charge load you could get away with a lower amount like a 10W.

Can a solar panel be mounted on a bike?

If you have the solar panel mounted on your bike while riding. The direction your panel is facing to the sun, any shade and other factors when riding around and always changing directions will effect the power you end up accumulating. The Goal Zero Nomad Plus range comes in three different models the 7, 14 and 28 watt.
