To date, Madagascar produces 2% of its electricity from photovoltaic solar energy. At the same time, Madagascar remains one of the worst performers on the African continent when it comes to access to electricity, with 75% of the population lacking this essential service. Households connected to the national grid have to cope with load shedding ...

Madagascar is the largest island state in Africa and the fourth largest island in the world. With the equivalent of 440 US dollars a year¹, the annual gross national income per capita is far below the average of the other African states south of the Sahara. Only about 15% of the Madagascan have an electricity connection, in the rural areas less than one out of ten persons².
