

What is Jamaica's energy source?

This page is part of Global Energy Monitor 's Latin America Energy Portal. Oil and natural gas continue to supply most of Jamaica's energy, supplemented by significantly smaller contributions from renewables. As of 2020, nearly 89% of electricity was still generated by fossil fuels.

What is the cost of electricity in Jamaica?

Jamaica's electricity cost is approximately \$0.39 per kilowatt-hour (kWh). This information is provided in the energy snapshot of Jamaica, an island nation located in the north Caribbean Sea. The utility rates are above the Caribbean regional average of \$0.33/kWh.

Is Jamaica following the National Energy Policy 2009-2030?

Jamaica is currently following the National Energy Policy 2009-2030. Jamaica's December 2020 update to its NDC (Nationally Determined Contribution) aims to reduce greenhouse gas emissions by more than 25% relative to business as usual levels by 2030, with the majority of reductions coming from the energy sector.

Does Jamaica use solar power?

Jamaica has yet to see large-scale development of solar power, with no utility-scale facilities installed to date. However, there are notable solar installations, such as the 1.6-MW rooftop array at the Grand Palladium Jamaica Resort & Spa and the combined 500 kW installed across 33 facilities by the Jamaica Broilers Group.

Does Jamaica produce natural gas?

Jamaica was not producing natural gas as of 2017. In 2016, Jamaica consumed 54,000 barrels of oil per day. In 2017, Jamaica consumed 6,961 million cubic feet of natural gas.

Why is electricity inexpensive in Jamaica?

Jamaica's electricity is inexpensive due to the fact that more than 94% of the island's electricity is generated from petroleum-based fuels. This leaves Jamaica highly dependent on imported fossil fuels and vulnerable to oil price and currency exchange fluctuations that directly impact the cost of electricity.
