

Who imports the fuel in Cook Islands?

85% of the country's fuel and all of its jet fuel is imported by Pacific Energy. The Energy Act 1998 established an Energy Division within the Ministry of Works, Energy and Physical Planning (now Infrastructure Cook Islands) responsible for energy policy and electricity inspections.

How much energy does the Cook Islands use?

The Cook Islands is a net importer of energy, in the form of petroleum products. Total energy consumption was 1,677,278,000 BTU (1.77 TJ) in 2017, of which 811,000,000 (0.86 TJ) was in the form of oil. In 2012 47% of imported oil was used in the transport sector, 30% in aviation, and 27% for electricity generation.

What changes will the Cook Islands make?

The changes will include management of power utilities, environmentally friendly and cost effective renewable electricity sources, and energy efficient strategies. The Cook Islands will be careful in its selection of renewable electricity options and will not entertain unproven or non-commercial technologies.

Can solar power be used in the Cook Islands?

The Cook Islands has abundant solar radiation, which makes solar electricity PV an attractive option. On average, about 80 percent of households already use solar water heating, and we are committed to increasing the use of photovoltaics for electricity generation and to reduce reliance on diesel.

Why is pricing important in the Cook Islands?

Pricing is a key tool for influencing consumer behaviour. An appropriate price needs to be set that encourages energy efficient behaviour and reduces the costs to the Government, whilst also achieving its vision of reducing the costs of living and business for residents and attracting Cook Islands people to live and invest in their homeland.

What makes the Cook Islands unique?

As a small island developing state, the Cook Islands has unique attributes that considerably enhance the benefits to be gained from renewable electricity. Located in the South Pacific Ocean, the Cook Islands is sandwiched between Tonga to the west, Kiribati to the north and French Polynesia to the east.

Renewable energy in the Cook Islands is primarily provided by solar energy and biomass. Since 2011 the Cook Islands has embarked on a programme of renewable energy development to improve its energy security and reduce greenhouse gas emissions, with an initial goal of reaching 50% renewable electricity by 2015, and 100% by 2020. The programme has been assisted by ...

In its approach to delivering a 100% renewable energy target across 12 islands by 2020, the Cook Islands presents a rare insight into how planning requirements of high penetration renewable...
