

Why should you choose Langa international?

One of Langa International's major assets is its ability to develop innovative solutions to meet the various constraints faced by its customers. With its extensive experience in France and abroad, LANGA INTERNATIONAL has mastered the entire value chain involved in developing wind energy projects.

Where can Langa solar work?

Ground-mounted solar: LANGA International works on generally degraded land: wasteland, desert areas, former quarries, former landfill sites or low-yield agricultural land. These projects can be optimised by installing tracker systems to follow the sun's cycle and maximise electricity production.

What agrivoltaics solutions is Langa international working on?

LANGA International is also working on dynamic agrivoltaics solutions: a solution based on the synergy between electricity production and the maintenance of agricultural production according to the vagaries of the weather.

How many MWp does Langa International have?

Today LANGA International operates more than 40 MWp, spread over several territories. All these plants are managed by LANGA International's local teams. Our strategy is based on a dynamic of concerted deployment with local players, to participate in the development of more responsible local energy independence.

RESUMO As profundas transforma&#231;&#245;es que marcaram o setor sucroenerg&#233;tico no in&#237;cio do s&#233;culo XXI estimularam sua expans&#227;o, impulsionadas pelo capital financeiro, com importantes repercuss&#245;es de ordem territorial.

I november 2021 beslutade klagarmyndigheten att väcka tal mot Ian H. Lundin samt Alex Schneider, som vid tidpunkten var styrelseordförande respektive styrelseledamot i Lundin Energy, i förhållande till tidigare verksamhet i Sudan mellan åren 1999 och 2003.

Renewable Energy in South Sudan. Currently, most of the country's energy production takes place in the capital city of Juba, with very little power infrastructure outside of this hub. Because South Sudan is still in the beginning stages of their infrastructural development, there is a rare opportunity to move forward and address the issue of ...

Energy in Sudan describes energy and electricity production, consumption and imports in Sudan. The chief sources of energy in 2010 were wood and charcoal, hydroelectric power, and oil. [1] Sudan is a net energy exporter. Primary energy use in Sudan was 179 TWh and 4 TWh per million persons in 2008. [2]
