

Can Latvia achieve energy savings by renovating its building stock?

Latvia could achieve considerable energy savings by renovating its building stock. Latvia holds considerable potential to accelerate energy efficiency outcomes in the buildings sector, which will go a long way toward meeting climate targets and lowering energy bills.

What is Latvia's energy demand?

Latvia's energy demand is dominated by an ageing building stock, which accounts for nearly half of total final consumption, with residential buildings alone accounting for a third of total consumption.

Will electricity be the cornerstone of Latvia's energy transition?

Electricity will be the cornerstone of Latvia's energy transition. Latvia's hydro-dominated electricity system provides a favourable starting point to use clean electricity to decarbonise other economic sectors and meet the target of 57% renewables in total final consumption by 2030.

How much renewable power does Latvia have in 2022?

In 2022, Latvia installed around 0.1 GW of renewable capacity, bringing the total to 1.9 GW (vs. 1.8 GW in 2021). In 2022, the annual growth rate of installed renewables power capacity rose to 8%, compared to 0% in 2021.

How can wind and solar power projects help Latvia?

Bringing wind and solar power projects online will also help reduce Latvia's dependence on natural gas imports and can contribute to lower electricity prices; current efforts to develop offshore wind will support this outcome.

How has Latvia managed to unlink its energy dependency from Russia?

Overall, Latvia has made considerable progress in unlinking its energy dependency from Russian imports in a short period of time, including by imposing bans on the import of electricity and natural gas from Russia in 2023. The government is also changing its storage model for oil reserves to further fortify its oil security.

After the rapid recovery of the economy from the Covid-19 pandemic crisis in 2021, growth in Latvia slowed down to 3% in 2022. The economic development in 2022 was significantly affected by supply chain disruptions caused by Russia's invasion of Ukraine, the rise in inflation caused by the cost of energy resources and food, as well as the decrease in global demand.

trends and energy prices is essential for assessing their impact on the industry's operations. Figure 1. Energy resource consumption in timber industry enterprises in Latvia 2014.-2021., ...
