

Which energy sources are used in Latvia?

Latvia has underground gas storage facilities at the Incukalna UGS, with a capacity of 4.47 billion m³. Natural gas companies include Latvijas Gaze. Renewable energy includes wind, solar, biomass and geothermal energy sources. Almost half of the electricity used in the country is provided by renewable energy sources.

Will electricity be the cornerstone of Latvia's energy transition?

Electricity will be the cornerstone of Latvia's energy transition. Latvia's hydro-dominated electricity system provides a favourable starting point to use clean electricity to decarbonise other economic sectors and meet the target of 57% renewables in total final consumption by 2030.

What is the main renewable resource in Latvia?

The main renewable resource is hydroelectric power. Latvia has laws that regulate the building of power plants and plans to sell electricity at higher prices. This is a stimulus for investment, especially taking into consideration the fact that Latvia cannot offer big subsidies in order to attract investment.

How much electricity does Latvia use per capita?

In 2018, electricity consumption per capita was 3731 kWh. Latvia has adopted the EU target to produce 50% of its energy from renewable sources by 2030. The 2021-30 plan set a target of reducing greenhouse gas emissions by 65% compared to 1990. There is a target of being carbon neutral by 2050.

Can Latvia achieve energy savings by renovating its building stock?

Latvia could achieve considerable energy savings by renovating its building stock. Latvia holds considerable potential to accelerate energy efficiency outcomes in the buildings sector, which will go a long way toward meeting climate targets and lowering energy bills.

What is Latvia's energy demand?

Latvia's energy demand is dominated by an ageing building stock, which accounts for nearly half of total final consumption, with residential buildings alone accounting for a third of total consumption.

Latvia's smart energy sector encompasses hydrogen initiatives (Naco Technology, Green Tech Cluster), wind energy, solar (Latvenergo, Institute of Physical Energetics), hydroelectric power (Latvian HPP), and ammonia based energy solutions (PurpleGreen). The sector also focuses on the production, transportation, transformation, and utilization ...

We spoke with Latvia's newly-appointed Minister of Climate and Energy Raimonds Čudars about the current challenges to address, the Ministry's vision in the short- and long-term, the concrete possibility to build the country's first LNG terminal and what we can expect to see in terms of climate policies.

The EU climate and energy package of 2020 states that Latvia has committed itself in trying its best to increase energy efficiency by reducing energy consumption in many sectors. At the same time, the country should implement changes to balance its energy sources towards an increased use of renewable energy. This also means less dependence on ...

BANGALORE: Global development finance institution Proparco is currently in discussions to invest \$10 million (about Rs 54 crore) in RenewGen Enviro Ventures India, a Bangalore-based renewable energy firm. The investment, which will be in the form of debt, follows the \$9 million debt-and-equity investment made by International Finance Corp, the private ...

According to Valdmanis, the next task of the Ministry of Climate and Energy is to improve the regulatory framework in order to avoid legal uncertainty for investors, particularly in the development of electricity plants. This is in line with the minister's strategic objectives of significantly expanding renewable energy production in Latvia.

From 1 January 2023 Latvia banned the import of natural gas from Russia. The replacement comes from connections to LNG terminals, the Klaipeda LNG terminal in Lithuania, and from 2024 the recently-opened Inkoo LNG terminal in Finland. JSC Conexus Baltic Grid is the natural gas transmission system operator in Latvia. International transmission pipelines are 577 km long, consisting of the Riga-Pahneva, Pleskava-Riga, Izbors...

Despite having grown over time and remaining twice as productive as the economy on average (Figure 1), Latvia's energy sector growth has decoupled from overall economic growth and the sector has gradually lost its share in GDP over the recent decades. Figure 1. Productivity, EUR per hour worked.

Electricity will be the cornerstone of Latvia's energy transition. Latvia's hydro-dominated electricity system provides a favourable starting point to use clean electricity to decarbonise other economic sectors and meet the

Latvia renewgen energy

target of 57% ...

Promote the use of wind energy in Latvia. Work towards ensuring a wind energy inclusive and stable regulatory framework. Advance an active involvement of Latvian companies in wind industry. Wind energy statistics. 20%. of total European electricity production. Cheaper. than other forms of energy. 300,000.

RENEWGEN AS sells solar lanterns, lamps and solar home systems to rural households through PAYGO model and consumer finance. Their mission is to provide access to sustainable energy through innovative solar solutions to rural households of Burundi.

Latvia Total Energy Consumption. Energy consumption per capita is 2.2 toe, including 3 400 kWh of electricity, i.e. around 21% below the EU average (2023). Graph: CONSUMPTION TRENDS BY ENERGY SOURCE (Mtoe) Total energy consumption has been decreasing by 2%/year since 2018, to 4.3 Mtoe in 2023, after fluctuating around 4.3 Mtoe between 2011 and ...

Latvia Renewable Energy Supply: Tonnes of Total Energy Supply data was reported at 2,201,920.800 TOE th in Dec 2023. This records an increase from the previous number of 1,906,439.800 TOE th for Dec 2022. Latvia Renewable Energy Supply: Tonnes of Total Energy Supply data is updated yearly, averaging 1,424,217.050 TOE th (Median) from Dec 1990 to ...

Latvia to undertake ambitious wind energy projects in coming years If the private developers and also the state really implement the current plans for the coming years in setting up wind parks, the operation of such generators could produce electricity for more than half of Latvia.
