

# Latvia smart wind and solar power

Is Latvia planning to use wind and solar energy?

Skeptical of Latvia's ambitions to use wind and solar energy is the Chairman of the Board of the Latvian Renewable Energy Federation Janis Irbe. He pointed out that Latvia has no strategic plan in energy for the next ten years. The interest of foreign investors is high, projects are examined in a number of ways, but not leading to real jobs.

Does Latvia need a smart energy infrastructure?

Latvia already has the necessary energy infrastructure in place in order to successfully harness smart renewable energy on the coasts and in the forests of Kurzeme, as well as collaborate with its Nordic neighbours in electrical trade.

Can Latvia achieve energy savings by renovating its building stock?

Latvia could achieve considerable energy savings by renovating its building stock. Latvia holds considerable potential to accelerate energy efficiency outcomes in the buildings sector, which will go a long way toward meeting climate targets and lowering energy bills.

Will electricity be the cornerstone of Latvia's energy transition?

Electricity will be the cornerstone of Latvia's energy transition. Latvia's hydro-dominated electricity system provides a favourable starting point to use clean electricity to decarbonise other economic sectors and meet the target of 57% renewables in total final consumption by 2030.

What is Latvia's energy demand?

Latvia's energy demand is dominated by an ageing building stock, which accounts for nearly half of total final consumption, with residential buildings alone accounting for a third of total consumption.

How has Latvia managed to unlink its energy dependency from Russia?

Overall, Latvia has made considerable progress in unlinking its energy dependency from Russian imports in a short period of time, including by imposing bans on the import of electricity and natural gas from Russia in 2023. The government is also changing its storage model for oil reserves to further fortify its oil security.

Solar, wind and other "green" sources contributed 21.8 per cent to the EU's total energy consumption, according to Eurostat. This was a 0.3 per cent drop on 2020; the first decrease ever ...

The fourth energy revolution is characterized by the incorporation of renewable energy supplies into intelligent networks. As the world is shifting towards cleaner energy sources, there is a need ...

The big players. If you look at scale alone, China (728 TWh), the EU-27 (540 TWh) and the United States (469 TWh) stand out as the largest producers of wind and solar power. Together they are responsible for more

...

For more on time and spatial estimate of energy generation using renewable sources, see: Pakere I, Kacare M, Gr?velsi?? A, et al. (2022) Spatial analyses of smart energy system implementation through system dynamics and GIS modelling. Wind power case study in Latvia. Smart Energy 7: 100081. DOI: 10.1016/j.segy.2022.100081.

The most ambitious solar power plant in Latvia to date - Kalk?nes SES in the region of Aug?daugava, near Daugavpils - has started production. The new power plant has sufficient production capacity to supply at least 6,500 households in Daugavpils, investors say, Latvian Radio reported on May 3.

Central Statistical Bureau data published on September 6 show that 6 388 GWh of electricity were generated in Latvia in 2023 (27.0 % more than in 2022), of which 4 963 GWh from renewable energy resources (renewables). ...

A plant in Hjuleberg, Sweden, is using a solution based on new smart technology, combining wind power and batteries to bring optimum stability to the grid. By Lars-Magnus Kihlstr&#246;m. Share. Facebook; ... Wind and solar power are the fastest-growing energy sources in the world today, thanks to their low climate impact and high cost-efficiency ...

A decade ago, solar generation costs were well above \$300, while onshore wind power hovered above \$100 per MWh. Today the best solar projects in Chile, the Middle-East and China, or wind projects in Brazil, the U.S. and India, can achieve less than \$30 per MWh. And there are plenty of innovations in the pipeline that will drive down costs ...

A decade ago, solar generation costs were well above \$300, while onshore wind power hovered above \$100 per MWh. Today the best solar projects in Chile, the Middle-East and China, or wind projects in Brazil, the ...

Today, Ingka Group owns and manages 547 wind turbines, 10 solar parks in 15 countries and 935,000 solar panels on the roofs of IKEA stores and warehouses, bringing its total installed renewable energy power to more than 1.7 Gigawatt.

Spanggaard said that European Energy is currently considering power purchase agreements for the 155 MW solar power plant, but in general, Latvia needed "more experience" structuring PPAs and ...

wind and solar power projects online will also help reduce Latvia's dependence on natural gas imports and can contribute to lower electricity prices; current efforts to develop offshore wind will support this outcome. The government will likewise need to clarify the role of natural gas co-generation plants in the energy mix over

Bringing wind and solar power projects online will also help reduce Latvia's dependence on natural gas imports and can contribute to lower electricity prices; current efforts to develop offshore wind will support this

outcome.

This means that the greatest contribution to this growth will be in the form of wind and solar energy. It is a positive future," said ?boliti??. This means that it is planned to increase wind power capacity to 800 or up to 1000 ...

This means that the greatest contribution to this growth will be in the form of wind and solar energy. It is a positive future," said ?boliti??. This means that it is planned to increase wind power capacity to 800 or up to 1000 megawatts in Latvia in the coming years. Wind development plans are also ambitious in Lithuania and Estonia.

Latvia's potential for renewable energy resources - wind and solar - is currently being exploited to a negligible extent. Why is it that Latvia is using renewable resources so little? Latvian Radio spoke to energy experts ...
