**Li Polymer Battery Discharge Temperature** The battery shall be discharged within -20℃~60℃ range specified in the Product Specification. **Li Polymer Battery Over Discharging** LiPo Battery would be at an over-discharged state by its self-discharge characteristics in case the battery holds for a long time. To prevent over-discharging, the battery ...

The reasons for this are: the battery is not fully charged; the single-string voltage capacity difference is significant; the battery pack is short-circuited or the battery pack self-discharge, causing the battery pack to be fully charged when it was consumed. For the above defects, the battery pack can be recharged or replaced with a bad battery.

4.1.1 The casing of a lithium-ion cell or single-cell battery, or the enclosure of a lithium polymer battery pack shall have the strength and rigidity required to resist the possible abuses, that it is exposed to during its intended use, in order to reduce the risk of fire or injury to persons.. 4.1.2 The casing of a lithium-ion battery

pack shall be rigid enough to prevent flexing.

The larger the C-rate number of a li polymer battery, the higher the rate of the li polymer battery. For example, for a 3000mAh battery, 0.2C means 600mA (0.2 times of 3000mAh), and 1C means 3000mA (1 times of 3000mAh). And the 3000mAh li polymer battery with a rated rate of 1C means that its discharge speed should not exceed 3000mA (3A).
