Why should Lithuania invest in solar energy?

To be an active partner of society, politicians and business, creating a suitable and sustainable environment for the development of solar energy in Lithuania. We unite solar energy market players to inspire, encourage and help Lithuania to use solar energy as a clean, renewable source of energy, ensuring energy independence and a secure future.

Will Lithuania achieve a climate-neutral energy sector?

Lithuania closed the Ignalina Nuclear Power Plant in 2009 and currently operates synchronously with the Russia-Belarus power system, though a de-synch is planned in early 2025. To achieve a climate-neutral energy sector, Lithuania will have to more than triple the amount of renewable energy generated.

What is Lithuania's energy policy?

Lithuania's energy policy aligns sustainability goals with the objectives of boosting energy security, competitiveness and technology innovation. As such, the country's energy policies are broadly aligned with the IEA Shared Goals (see Annex D). Over the past decade, Lithuania has witnessed several energy transitions.

How does low energy prices affect Lithuania's economy?

Low prices for energy and other resources, and (to a certain extent) low labour costs, play a key role in keeping Lithuania's economy competitive. However, the recent sharp increase in energy prices and the continued convergence of wages with the EU average puts the sustainability of this growth model into question.

What percentage of Lithuania's energy consumption is renewable?

Renewable energy represents an increasing share of Lithuania's energy and electricity gross final consumption. Between 2020 and 2021, the share of Lithuania's gross final consumption of energy from renewable sources rose from 27% to 28%. In gross electricity consumption, renewables accounted for a 21.3% share in 2021 (+1.1 percentage point).

Does Lithuania rely on Russian energy?

Lithuania has successfully overcome its dependency on Russian energy but remains heavily reliant on energy imports.

Following the unprecedented crisis caused by the COVID-19 pandemic, Lithuania's recovery and resilience plan has responded to the urgent need to foster a strong recovery, while making Lithuania's economy and society more resilient and future ready. In response to the energy market disruption caused by Russia's invasion of Ukraine, the Commission launched the REPowerEU ...
