

What is the energy access problem in Mali?

Mali faces a critical energy access challenge. The national power access rate was 50% in 2019 (compared to 36.11% in 2015). The problem is particularly acute in rural areas with 21.12% access rate in 2019 (compared to 15.75% in 2015).

What is Mali's energy mix?

In 2019, Mali's energy mix was dominated by biofuels and wastes (65%) and oil products (32%), with coal and hydro accounting for the rest. In 2020, less than 5% of the population had access to clean cooking and 52% had access to electricity.

Will Mali achieve universal access to electricity by 2030?

For clean cooking, Mali targets universal access by 2030. In recent years, the rate of access to electricity in Mali has surpassed 25%, thanks to a public focus on mini-grid solutions. The government of Mali now plans to increase hybridisation of its mini-grids by adding PV capacity to diesel power plants.

Is biomass a good energy source in Mali?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Mali: How much of the country's energy comes from nuclear power? Nuclear energy - alongside renewables - is a low-carbon energy source.

What type of electricity is used in Mali?

Renewable electricity here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal power. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Mali: How much of the country's electricity comes from nuclear power?

What is the power access rate in Mali?

The national power access rate was 50% in 2019 (compared to 36.11% in 2015). The problem is particularly acute in rural areas with 21.12% access rate in 2019 (compared to 15.75% in 2015). Power generation is limited (Annex A.17), forcing Energie du Mali (EDM, the power utility) to have recourse to frequent load shedding.
