What is a solar installation safe work method statement (SWMS)?

This Method Statement for Solar Panel addresses the hazards and controls involved with solar panel installation on a roof. The purpose of this Solar Installation Safe Work Method Statement (SWMS) is to describe the sequential approach for the installation of PV Modules in accordance with the contract requirements.

What is the construction and installation phase of a solar project?

With permits and financing secured, the construction and installation phase of a solar project can commence. This phase is where the physical solar panels and equipment are installed on-site and connected to the power grid. It includes several key steps that require careful planning and execution.

How are solar panels installed?

Solar panel installation requires careful planning and execution to ensure they are installed safely and effectively. The numerous mounting systems will be installed on the ground or on a roof, depending on the design of the solar project.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.

How do I choose a solar PV system?

Determine how well a solar PV system is likely to perform given possible array capacities, placements, and measured local shading constraints. Ensure the building plans, electrical infrastructure, and mechanical equipment placements (vents, stacks, etc.) adequately provide for solar PV installation.

How do I connect my PV system to the grid?

Connecting to the electricity grid - Connecting the PV system up to the grid requires your installer to work with the DNO (District Network Operator). Each region has their own provider. This is the electricity company responsible for the power grid infrastructure and not your energy provider.
