ME Storage Math. Storage Cells have limits of size, and limits of types, plus you need to consider the resource usage of your cells, to decide what your best options are. Each storage cell can store a fixed amount of data. Each type consumes a number of bytes (which varies with the cell size), and each item consumes one bit of storage, so eight items consume one byte, and a full stack ...

Applied Energistics vs. Refined Storage . So I'm currently playing ATM8 and was think about getting a computerized storage system running. I've done AE in the past so I'm familiar with it but I've never used Refined Storage. They seem very similar to me based on the few things I've seen. ... Applied Energistics 2 noob questions

The storage buses normally come configured to return items to that location, as long as there are already some of the corresponding items within the inventory that the storage bus is connected to. I might be wrong, but it looks like your storage bus is just connected directly to a drawer, and not a controller, which will not work.

Applied Energistics 2 is more flexible, but at the cost of being more complex. It has more gating and challenging mechanics, which IMO makes it more balanced overall. The mod wants you to think about how you are doing things basically the entire time, even down to what Storage Cell Size you should use.

Connect an inventory of your choice (storage drawers are nice) to your network with a storage bus. Then place an export bus onto the chest/drawer and equip it with a crafting card. Your AE ...

Perhaps the most telling difference is the two mods' "Block Placer" components. The RS Constructor has a single filter slot, which must be filtered in order to work, and will actively remove an item from storage and place it in the world. If you want to place a second block in the same area, you need a 2nd Constructor.

The ME Storage Bus, when attached to another inventory block in the world lets you access that inventory via networked functions. This allows you to use chests, barrels, or other types of item storage in your networks.

A 1k Storage Cell can store over 8k of a single item or up to a little over 4k items if you have the maximum of 63 different item types (item stack sizes don't matter). A RS 1k Storage Disk can store 1,000 items without any other restrictions or intricacies. Sub-Networks: Many of AE2's Sub-Network mechanics are used to get around channel ...

Applied Energistics: Upgrading Storage Cells . Question I'm starting to outgrow the 16k storage cells in my ME system. Seriously, I've got at least 50 items with over 20k in ME storage. I need to upgrade to 64k cells, but I don't think my wrist will take it. What is the quickest way to automate this transfer between cells?

Isn't refined storage a reboot of the original AE? Personally, I don't care for the meteors in AE2. They litter up the overworld, and you sometimes have to find and crack open a bunch of them before you find everything you need to get started. I'll still play a pack that only has AE2, but I prefer Refined Storage.
