

Who is JECO energies?

Jeco Energies was founded just seven months ago - a short period in which a lot changed, both in the energy sector and beyond. During this time, our goal has remained the same: to become a pioneer in industrial energy. This is what we were able to realise in 2022: 1. Jeco Energies is born

How is electricity transported in New Zealand?

Electricity is transported at high voltage (up to 220,000 volts) through a high-voltage alternating current system around New Zealand. To transfer electricity between the North and South Island, there is a high-voltage direct current (HVDC) inter-island cable with a transmission line under the Cook Strait.

How many terajoules can NZEC deliver a day?

Management of NZEC expects the reservoir to be able to deliver at least 10 Terajoules/Day (9 MMSCF/Day), which is sufficient to exceed the requirements of the Gas Sales Agreement between the Tariki Joint Venture and Genesis Energy.

How is electricity transferred between North and South Island?

To transfer electricity between the North and South Island, there is a high-voltage direct current (HVDC) inter-island cable with a transmission line under the Cook Strait. Electricity generated in the South Island is often transported north via the HVDC cable, as the North Island has higher electricity demand.

As recently as June 2022, Jef's team announced that it would continue under the new name Jeco Energies, following a merger of DSG Belgium, DSG Netherlands and their independent spin-off GENS Rental. Also joining the team was Bob Zegers as the new CEO at the helm. "So a lot of big changes," Bob says.
