

Is Norway a secure supplier of oil and gas to Europe?

**TRANSITION IN AN EU CONTEXT** Norway faces a difficult conundrum in balancing its role as a secure supplier of oil and gas to Europe, building a strategic position in energy transition opportunities -- while managing inherent transition risks for its oil and gas resources -- and meeting its own decarbonization ambitions und

Why is the energy transition in Norway so important?

hind its announced ambitions. The energy transition in Norway is closely linked to EU climate goals, energy transition policies, and energy- related dilemmas, and heavily impacted by international factors including the war in Ukraine and global supply-chain problems. EU demand, regulation, and policies are driving energy di

Why are Norwegian electricity prices so high?

That occurs particularly when there is little to no wind and solar energy being produced, as at present, combined with low winter prices leading to high demand. Norwegian consumers are somewhat insulated from the high prices as the government pays for 90 per cent of electricity over a certain price.

How much hydrogen does Norway produce a year?

hydrogen and its derivatives. Such production will increasingly be larger than domestic demand, and Norway will export 29 TWh/yr of electricity, 3.5 Mt/yr hydrogen on are simplified 5 EMISSIONS The energy sector is the dominant source of anthropogenic greenhouse gas (GHG) emissions globally and in Norway.

Is Norway a good country for hydrogen production?

the size of their economies. Norway is in a very good position to support this transition in Europe. Today, Norway uses predominantly natural gas and coal as sources for hydrogen production for use as industrial feedstock. By mid-century, Norway's domestic hydrogen demand more than doubles, but its hydrogen production

Why is the Norwegian oil and gas industry so important?

ll relevant investment data). Though predominantly capital-intensive, the Norwegian oil and gas industry engages a crucial part of the labour force, which is consequently unavailable for electrifying industrial energy use and the build-out of the renewable power, transmiss
