

What is open-circuit voltage in a solar cell?

The open-circuit voltage,  $V_{OC}$ , is the maximum voltage available from a solar cell, and this occurs at zero current. The open-circuit voltage corresponds to the amount of forward bias on the solar cell due to the bias of the solar cell junction with the light-generated current. The open-circuit voltage is shown on the IV curve below.

How does open-circuit voltage affect solar cells?

As one of the key parameters to optimize solar cells, the open-circuit voltage, which is the maximum voltage a solar cell can provide to an external circuit, has been extensively studied. It has been found that using different materials in organic and inorganic solar cells can affect their open-circuit voltage [ 1, 2, 3 ].

Is there a physical model of open-circuit voltage in solar cells?

After the hot carrier effects in a PN junction before carriers overcome the Schottky barrier on the thermionic emission theory are considered, a physical model of the open-circuit voltage in solar cells is proposed. Thus, an analytical and physical open-circuit voltage in solar cells has been developed.

What is  $V_{OC}$  in a solar cell?

The open-circuit voltage,  $V_{OC}$ , is the maximum voltage available from a solar cell, and this occurs at zero current. The open-circuit voltage corresponds to the amount of forward bias on the solar cell due to the bias of the solar cell junction with the light-generated current.

What is open circuit voltage?

Open circuit voltage  $V_{oc}$ : When light hits a solar cell, it develops a voltage, analogous to the e.m.f. of a battery in a circuit. The voltage developed when the terminals are isolated (infinite load resistance) is called the open circuit voltage.

What is open-circuit voltage & fill factor?

The open-circuit voltage corresponds to the amount of forward bias on the solar cell due to the bias of the solar cell junction with the light-generated current. The " fill factor ", more commonly known by its abbreviation "FF", is a parameter which, in conjunction with  $V_{oc}$  and  $I_{sc}$ , determines the maximum power from a solar cell.
