

How can Portugal meet growing energy demands in a sustainable way?

Meanwhile, the rapid expansion of hydroelectric and solar energy capacity is helping Portugal meet growing energy demands in a sustainable way. These efforts align with European Union objectives, such as the RePowerEU plan and the Renewable Energy Directive, which targets 42.5% renewable energy in total consumption by 2030.

Why is Portugal moving to a cleaner energy source?

This milestone also aligns with the country's broader energy transition goals, which began decades ago and saw a major turning point in 2021, when Portugal became one of the first European nations to cease coal-powered electricity production. This shift towards cleaner energy sources has not only benefitted the environment but also the economy.

Is Portugal a beacon of Hope?

Portugal stands as a beacon of hope amid these challenges. The country has emerged as a leader in renewable energy, with solar energy contributing to 73% of national consumption. The remarkable increase in renewable energy generation reflects not only the growing capacity of Portugal's infrastructure but also a societal shift toward sustainability.

What is Portugal's energy transformation?

Portugal's transformation is more than just about energy production; it's a narrative of resilience, innovation, and community spirit. As the country forges ahead, its commitment to renewable energy serves as a powerful reminder that a brighter, greener future is possible, and it begins with each of us.

How many GWh of electricity is generated in mainland Portugal?

Between January 1 and October 31, 2024, 38,229 GWh of electricity were generated in Mainland Portugal, from which 81.8 % came from renewable sources. Source: REN Analysis: APREN In October 2024 renewable incorporation on electricity generation was 78,6 %. On the other hand, fossil thermal electroproduction centers represented 11,9%.

Why does Portugal need fossil fuels?

This is mainly due to the lack of fossil energy sources, which continues to impact the total consumption of primary energy significantly. The main fossil fuels that account for the primary energy supply are oil, natural gas, and coal. It is estimated that Portugal's fossil fuel dependence by 2030 will be around 65%.
