Can a microgrid power a command post?

Soldiers test the hybrid power system microgrid at Fort Bragg, North Carolina. The Army is looking at new technology, such as microgrids, that can more efficiently power command posts and division tactical operations centers.

Can a tactical battalion command post support mobile military microgrids?

The tactical battalion command post can serve as the kernel of the mobile military microgrids needed to integrate ECVs and DEWs in brigade combat teams for multi-domain operations. Integrating energy storage and limited renewable energy generation is essential to supporting these emerging technologies and capabilities.

What is a hybrid AC microgrid?

The hybrid AC microgrid combines energy storage with traditional tactical generators, enabling demand reduction, reducing generator run time and providing uninterrupted backup power during tactical operations.

What is the tactical microgrid standard?

The Tactical Microgrid Standard (TMS) lays the foundation for the Center's research by establishing a common language for power units -- such as generators and batteries -- to communicate with each other.

How to modernize a command post microgrid?

To modernize the command post microgrid, a dual unit ESS concept is recommended. This ESS stores energy which can power DEW rapid discharge or charge ECVs. The addition of an ESS allows for the integration of PV generation into U.S. Army microgrids. A small array, 5 kW for example, can significantly reduce fuel consumption.

What is a DC vehicle-based microgrid?

The DC vehicle-based microgrid consists of modified medium tactical vehicles equipped with exportable power components. These vehicles can operate independently or be networked together to create a mobile electric power source, eliminating the need for traditional generators.
