

# Safety Operation Procedures for Energy Storage Lithium Batteries

Is lithium ion battery a safe energy storage system?

A global approach to hazard management in the development of energy storage projects has made the lithium-ion battery one of the safest types of energy storage system. 3. Introduction to Lithium-Ion Battery Energy Storage Systems A lithium-ion battery or li-ion battery (abbreviated as LIB) is a type of rechargeable battery.

What temperature should a lithium ion battery be stored?

Best working temperatures are between 15°C and 35°C. Proper lithium-ion batteries storage is critical for maintaining an optimum battery performance and reducing the risk of fire and/or explosion. Many recent accidents regarding lithium-ion battery fires have been connected to inadequate storage area or conditions.

Do you have a legal obligation to dispose of lithium-ion batteries?

The University is required to comply with legal obligations to minimise the risk of fire, damage, and injury as a result of storage and disposal of lithium batteries. Every employer must ensure that all employees who handle lithium-ion batteries for their work or use equipment or machines with batteries know the basic rules.

How do you store a lithium ion battery?

When not using your LiPo/Li-ion battery pack, store it at 60-70% of the pack's rated capacity. Lithium-ion cells should never be stored fully charged, it is suggested to store them with a voltage around 3.8V. Most of the chargers have a "storage mode" that will either charge or discharge the cell to the proper storage voltage.

Are lithium-ion batteries safe?

A global approach to hazard management in the development of energy storage projects has made the lithium-ion battery one of the safest types of energy storage system. ESI will continue to engage with its members to ensure that safety is at the forefront of grid-scale battery energy storage developments in Ireland.

What are Standard Operating Procedures (SOPs) for lithium and lithium-ion powered research devices?

Ensure that written standard operating procedures (SOPs) for lithium and lithium-ion powered research devices are developed and include methods to safely mitigate possible battery failures that can occur during: assembly, deployment, data acquisition, transportation, storage, and disassembly/disposal.
