What are the safety requirements for electrical energy storage systems?

Electrical energy storage (EES) systems - Part 5-3. Safety requirements for electrochemical based EES systems considering initially non-anticipated modifications, partial replacement, changing application, relocation and loading reused battery.

Are energy storage systems a problem?

To ensure power grid stability, demand for large stationary energy storage systems (battery cabinets) has increased rapidly. However, several fire and explosion incidents in connection with energy storage systems have made people realize that the road to renewable energy is not as smooth as one would hope, and that more challenges likely await.

How can energy storage systems be safer?

Making energy storage systems safer, ensuring safety in product design and production to avoid similar incidents, and adopting damage control and loss reduction mechanisms in the event of a disaster are all aspects that need to be considered and improved upon.

Are grid-scale battery energy storage systems safe?

Despite widely known hazards and safety design of grid-scale battery energy storage systems, there is a lack of established risk management schemes and models as compared to the chemical, aviation, nuclear and the petroleum industry.

What is an H&S risk related to an electrical energy storage system?

For this project we have adopted a broad definition for an H&S risk related to an Electrical Energy Storage (EES) system. This is: 'Any hazard caused by the energy storage system which could lead to the risk of injury or loss of life to any stakeholder who is interacting with the system across its lifecycle'.

How will grid scale electricity storage improve health and safety standards?

The deployment of grid scale electricity storage is expected to increase. This guidance aims to improve the navigability of existing health and safety standards and provide a clearer understanding of relevant standards that the industry for grid scale electrical energy storage systems can apply to its own process (es).
