Both generate power with solar, but a solar microgrid also can island from the grid, a crucial ability. Envision a storm where trees and branches are knocking down power lines. The electricity goes out in one neighborhood, then the next, then the next. Interconnected to the grid, the solar panels stop working too.

Solar microgrids can transform this reality, but they require substantial financial resources and a longer-term vision. Private sector investors and development finance institutions have a big responsibility to prevent hundreds of millions of children, like me, from having to inhale kerosene fumes night after night just to do their homework.
