Generally, solar panel systems can generate between 1kW and 4 kW so consider the size of your home and your energy needs. What are the different types of solar panel? There are two main technologies used to create solar panels: solar photovoltaic and solar thermal panels. Each type of solar panel works differently but gives similar results.

Regional solar panel installers are more likely to offer a more personalised customer service, and their response times may be faster if you encounter any problems with your solar system post-installation. They will also have in-depth knowledge of local regulations and incentives. For example, Scottish solar installers will be better versed on ...

The amount of solar panels you need will depend on whether your system is 3kW or 6kW, and the size of solar panels you will use. For example, if you install a 3kW solar panel system using 250W panels, then you need 12 solar panels. A 6kW system would need 24 solar panels.
