

Will a new regulation on rooftop solar power plants be enacted in Indonesia?

Now a new regulation on rooftop solar power plants has been enacted with the aim of finally realizing the untapped potential for solar power in Indonesia.

What is Indonesia doing with solar energy?

The Indonesian government has moved forward with the amendment of Energy and Mineral Resources Ministerial Regulation No. 26/2021 on on-grid solar systems and energy distribution and eliminated a key provision that previously allowed homeowners with rooftop solar panels to sell excess energy back to the national electricity firm, PLN.

What is a quota for rooftop solar PV in Indonesia?

Under the new regulatory regime, IUPTLU holders must establish a five-year quota for development of Rooftop Solar PV systems in Indonesia. The quota must take into account (i) the national energy policy, (ii) the IUPTLU holder's electricity supply business plan, and (iii) the reliability of the IUPTLU holder's electricity network.

Will PLN change the rooftop solar PV market in Indonesia?

Since nearly all Rooftop Solar PV systems in Indonesia (particularly those involving PLN) currently operate on a net-import basis, in practice, the impact of this change on the existing market should be relatively minimal. Nonetheless, this is a new restriction on the future potential of the Rooftop Solar PV sector in Indonesia.

How do I apply for a rooftop solar power plant?

All prospective customers must apply to the IUPTLU holder for the construction and installation of rooftop solar power plants, with a copy to both the Director General of New and Renewable Energy and Energy Conservation and the Director General of Electricity at the MEMR. We detail the application process further below.

Should new rooftop solar PV systems in Indonesia be removed?

The removal of capacity charges for all new Rooftop Solar PV systems in Indonesia should be welcomed by the industry, particularly those planning to operate on a net-import basis.

Moreover, solar air flat plate collector performances in the drying application of marine and agricultural

products are presented. The energy and exergy efficiencies of the solar air flat plate collector in the drying application (outdoor testing) range from 28% to 62% and from 30% to 57%, respectively.

Utomo SolaRUV mendorong peran swasta dalam gerakan dekarbonisasi industri melalui pemasangan PLTS Atap. Layanan SolaRUV Leasing atau sewa atap solar panel dengan mekanisme zero investment scheme didukung oleh ...

Solar array mounted on a rooftop. A solar panel is a device that converts sunlight into electricity by using photovoltaic (PV) cells. PV cells are made of materials that produce excited electrons when exposed to light. The electrons flow through a circuit and produce direct current (DC) electricity, which can be used to power various devices or be stored in batteries.

According to Article 24 of MEMR Reg 2/2024, an Operational Feasibility Certificate (Sertifikat Laik Operasi or "SLO") is required to be obtained for rooftop solar power plants with a total capacity of more than 500 kW (five ...

Solar System Components. The distributed solar systems under the Punjab Roshan Gharana Program will include advanced components such as solar plates for home-based usage, inverters, batteries, and other necessary accessories. **Eligibility Criteria.** To qualify for the Punjab Roshan Gharana Scheme 2024, applicants must meet the following criteria:

New Application Procedures. Under MEMR Reg. 2/2024, applications for installing solar rooftop systems can only be submitted from January to July. The applicant will submit the standard application form to the ...
