Do solar batteries need maintenance?

The longer answer? As usual, it depends, this time, on the chemistry of the battery. While lithium-ion battery technologies -the most common type of solar battery installed in homes and businesses-require very little or no maintenance, other types of batteries may require a trained technician to perform an annual check-up.

How to maintain a solar battery?

Here are some tactics that can go a long way in ensuring optimal performance and longevity. Cleaning your solar battery prevents dust and dirt from reducing its performance. A mixture of baking soda and distilled water can be used to clean the battery case and terminals.

Do FLA batteries need maintenance?

FLA batteries require more hands-on maintenance. Regularly topping off with distilled water, checking for corrosion, and measuring the specific gravity should be part of your routine care for these types of batteries. Proper solar battery maintenance is a crucial part of any solar energy system.

How often should a solar battery be charged?

It is recommended to set this at 50% state of charge (SOC). Solar batteries prefer regular charge cycles. If you have a standalone solar battery system, charging it fully at least every three weeks will help keep it healthy and increase its lifespan. Understanding when a battery is fully charged can be a bit tricky.

How to take care of a backup battery bank?

To take care of a backup battery bank, it's best to get AGM batteries, which we discuss below, because they require practically no maintenance, and trickle charge them off a small solar panel or other electricity source. If you use a good setup, your solar batteries can last 8 years.

How long do solar batteries last?

If you use a good setup, your solar batteries can last 8 years. Proper safety precautions must be taken whenever you are near your battery bank. Use thick gloves and protective eyewear and remove all metal items. The last thing you want is to be burned by acid or electrocuted.
