

1.3 Renewable Energy Context 5. Solomon Islands has considerable renewable energy potential. A summary of potential resources is presented below: Hydropower: Hydropower is well suited to the Solomon Islands due to the good hydrology and year round river flows. Hydropower has significant potential in Solomon Islands, both for large

WASHINGTON D.C., June 20, 2017 - Reliable renewable energy is a step closer for Solomon Islands, a country facing some of the world's highest per capita energy costs, following the World Bank Group's commitment to the Tina River Hydro renewable energy project.

The transition towards renewable energy in most PICs, mainly FSM, Nauru, Niue, Palau, RMI, Solomon Islands, Tonga and Vanuatu, shows little to no progress. This is perhaps one of the most worrisome observations. Within the given nine-year period, the increase in renewable energy shares in these countries has ranged from 0 to 9%.

The proposed Outer Island Renewable Energy Project (Project) will support development of renewable energy in the Solomon Islands. It focuses on the outer islands where the project will (i) decrease the cost of power supply by replacing diesel power generation with hydropower, (ii) increase access to power through expansion of existing distribution grids, and (iii) reduce ...

closely linked to the National Development strategy (NDS) of Solomon Islands 2016 - 2035 and its vision of a "United and Vibrant Solomon Islands". In this regard, Energy is included in the Solomon Islands National Infrastructure Investment Plan and NDS as being integral and important for achieving the goals of the NDS.
