Is Guatemala a good place to invest in solar energy?

Guatemala is the second largest Central American power market, with a goal to increase renewable energy use. Relatively high levels of solar irradiance and large areas of cleared land give the country a strong potential for increased solar energy development.

What products does sustain solar offer?

SustainSolar offers an innovative range of products consisting of modular, plug and play solutions suitable for various applications such as off-grid power supply, mini-grids for rural electrification, hybrid diesel fuel saver systems for commercial solutions and rapid deployment mobile systems.

What is the National Energy Plan of Guatemala?

New techniques and technologies will be needed to decarbonise these areas. The National Energy Plan of Guatemala defines the promotion of renewables as a priority. The plan aims to promote the use of clean and environmentally friendly energy for domestic consumption without losing sight of energy security and the need for supply.

Why did BMR decide to buy a solar farm in Guatemala?

As part of its evaluation process, BMR determined that the solar farm offered a strong return that was supported by Guatemala's well-established and stable regulatory system. BMR navigated a complex and cooperative sales process that involved four owners across three legal jurisdictions.

Does rain affect solar availability in Guatemala?

Note that there are distinct rainy (May-October) and dry (November-April) seasons in Guatemala that could impact solar availability; as such, we also collect the 30-year seasonal minimum and maximum values to get a representative range of insolation and air temperatures across Guatemala for sensitivity analysis.

What impact will energy stress have on Guatemala's economy?

More importantly, we find that the distribution of impacts will not be equal everywhere: households in the western, rural part of Guatemala that are already energy stressed will likely experience the greatest cost burdens because natural resource availability is low while overall poverty is already high.
