

Will Vietnam face an electricity shortage?

Strategic Plan for Transition to Renewable Energy Sources Vietnam's Energy Ministry predicts that the country is likely to face an electricity shortage as the development of new power plants lags behind the country's rapidly growing energy consumption. The government allowed Vietnamese companies to have 100% foreign ownership in the energy sector.

Which thermal power plant in Vietnam uses waste instead of coal?

As of now, the Phu Tho Thermal Power Plant is the sole thermal power plant in Vietnam, utilizing waste instead of coal. Vietnam holds vast potential in renewable energy sources like hydropower, solar energy, wind energy, and biomass.

What is Vietnam's energy mix in 2023?

An analysis was conducted on Vietnam's energy mix in 2023, including the examination of power plant capacities and the volume of energy production from fossil sources (coal, gas, oil) and renewable sources (hydropower, solar energy, wind energy, biomass energy).

Does Vietnam have oil-fired thermal power plants?

Kuwait stands as Vietnam's primary crude oil supply market, constituting nearly 90% of the total. Despite the considerable oil production, the mastery of oil refining technology remains lacking. Consequently, oil-fired thermal power plants in Vietnam face numerous limitations. They generated only 1267 thousand MWh in 2023.

Does Vietnam use oil as an energy source?

Oil is currently not used as an energy source; gas is imported. Considering the shortage of fossil energy sources and modern global trends (the transition to green energy, which helps reduce greenhouse gas emissions into the environment), it is necessary to diversify the energy sources used by Vietnam's energy system.

Who owns Vietnam's coal-fired power plants?

Most of the capacity of existing coal-fired power plants is owned by state-owned corporations, such as Vietnam Electricity; or EVN (57%), Vietnam National Petroleum Group, or Petrolimex (11%); and Vietnam Coal and Mineral Industries Group or Vinacomin (7%).
